General Details

Introduction

A Census of Population was taken on the night of Sunday, 21 April 1991, in accordance with the Statistics (Census of Population) Order 1991 (S.I. No. 62 of 1991)[1]. A copy of the census questionnaire including the explanatory notes which accompanied it is reproduced in Appendix 1, Volume 1 of the detailed census report.

This fourth volume of the detailed report contains detailed results relating to the population aged 15 years and over classified by their principal economic status and by the industry in which working. The territorial divisions of the country distinguished in this report are defined in Appendices 3–8 of Volume 1.

Subsequent census volumes will analyse the population by such characteristics as occupation, education, housing, etc..

Coverage

The census figures relate to the *de facto* population i.e. the population recorded for each area represents the total of all persons present within its boundaries on the night of Sunday, 21 April 1991, together with all persons who arrived in that area on the morning of Monday, 22 April 1991, not having been enumerated elsewhere. Persons on board ships in port are included with the population of adjacent areas. The figures, therefore, include visitors present on census night as well as those in residence, while usual residents temporarily absent from the area are excluded.

The date of the census was chosen to coincide with a period when passenger movements were at a minimum and, consequently, the figures closely approximate to those for the normally resident population. Members of the Defence Forces who on census night were serving abroad with the United Nations were excluded from the enumeration.

Conduct of the Census

The census enumeration was carried out by a specially recruited temporary field force consisting of 334 full–time supervisors and some 3,200 part–time enumerators. The census questionnaires were distributed during the three weeks immediately preceding the census night and the collection of the completed questionnaires commenced the following day. The enumerators examined the questionnaires at the time of collection to ensure that they were correctly completed; and, where necessary, they assisted householders in their completion.

Production of Results

Each enumerator first prepared and returned to the Central Statistics Office a summary of the population in his/her enumeration area. These summaries formed the basis for the preliminary 1991 population results issued in three census publications within months of the census date[2]. The completed questionnaires for the individual households were subsequently transmitted to the Central Statistics Office for processing.

The population summaries, dwelling listings and enumeration maps for individual enumeration areas were checked for consistency in county order and used to determine the boundaries of census towns and suburbs/environs of towns with legal boundaries. The first stage clerical scrutiny and computer processing of the entries for date of birth, marital status and relationship to head of household (questions 1–6) on the census questionnaire proceeded concurrently in the same county order. These two operations combined allowed the publication of the first set of final census results in a series of Local Population Reports which were issued on a county–by–county basis immediately results became available (see Appendix 1). A summary report for the State was issued in April 1993.

The derived first phase computer file forms the basis for three volumes of the detailed census report covering Areas, Ages and Marital Status, and Household Composition and Family Units. The computer processing of the remaining information on the census questionnaires enabled the publication of a second series of Local Population Reports covering place of birth, religion, Irish language, usual residence, car usage and household characteristics. Of the remaining volumes of the detailed census report, priority will be given to publishing those relating to Occupation and Education.

A complete list of the reports on the 1991 Census published to date is given in Appendix 1.

Small Area Population Statistics (SAPS)

Small area population statistics (SAPS) for Urban Districts, Rural Districts, Towns, District Electoral Divisions, etc. from the 1991 Census are available on a fee basis.

The SAPS contain detailed classifications of:

- the **population** by age, sex and marital status;
- **households** by type, size and by age, sex and marital status of the head of the household;
- **family units** by size and age of youngest child;
- the **population aged 15 years and over** by principal economic status, age and sex;
- **persons at work** by sex, employment status and broad industrial sector;
- **persons at work and unemployed** by sex and occupational group;
- the **entire population** by socio–economic group and social class.

Detailed classifications by means of travel and distance travelled to work, education, ability to speak Irish, religion and housing characteristics, etc. are also provided.

Principal Economic Status

The principal economic status was determined for persons aged fifteen years and over on the basis of the responses to the following census question:

PRESENT STATUS Q. 19

Indicate, by inserting ✓ in the appropriate box, the person's present principal status.

Self–employed persons should insert ✓ in Box 1.

Persons temporarily absent from work because of illness, holidays, etc., should insert ✓ in Box 1.

At work	☐ 1	Home (i.e. domestic) duties	☐ 5
Seeking regular work for first time	☐ 2	Retired	☐ 6
Unemployed	☐ 3	Unable to work owing to permanent sickness or disability	☐ 7
At school, student	☐ 4	Other	☐ 8
		Specify	

The following more specific instructions as to how the question should be answered were given in the explanatory notes attached to the census questionnaire:

(i) Self–employed persons should insert ✓ in Box 1.

(ii) Persons temporarily absent from work because of illness, holidays, etc., should insert ✓ in Box 1.

(iii) Apprentices who are in employment and who also attend technical schools or colleges of technology should insert ✓ in Box 1.

(iv) Full–time students who are in part–time employment should insert ✓ in Box 4.

Apart from the foregoing explanatory notes no further guidance was given as to how the categories distinguished in Q.19 should be interpreted. The answers, therefore, represent the subjective assessment of the person completing the form.

The labour force comprises persons whose principal economic status is either at work, looking for first regular job or unemployed having lost or given up previous job (i.e. categories 1, 2 and 3 of Q.19).

Industry

The industrial classification was determined for persons aged 15 years and over on the basis of the responses to the following census question:

EMPLOYER and EMPLOYER'S BUSINESS

For persons at work, if an employee, state name of employer (person, firm, company or public body) and nature of business carried on by the employer.

If self–employed, state the nature of business carried on.

If unemployed, state the name and nature of the business of last employer.

In addition the following instructions as to how the question should be answered were given in the explanatory notes attached to the census questionnaire:

This question should be answered in respect of each person, aged 15 years or over who is at work or unemployed.

(a) For a person at work:

(i) If an employee, state the name of the employer (whether person, firm, company or public body) and the nature of the business carried on by the employer.

(ii) If self–employed, state the nature of the business carried on.

(b) For an unemployed person, state the name and nature of business of the last employer.

The nature of business carried on should be described fully indicating the type of goods made or dealt with, or type of service rendered. For example, use descriptions such as "Shirt Factory", "Shoe Manufacturer", "Cattle Dealer", "Wholesale Tea Merchant", "Import Agent (Textiles)". Descriptions such as "Factory", "Manufacturer", "Dealer", "Merchant", "Agent", SHOULD NOT BE USED ALONE.

The next question on the census questionnaire asked persons to give the full address at which they worked. Sometimes the information on the nature of employer's business entered on the census questionnaire is not sufficiently precise to enable it to be accurately classified. In many of these cases the additional information on name and address of the employer allows the coders to identify the nature of business precisely with the aid of trade directories, etc.

The industry in which a person is engaged is determined (whatever the occupation) by the main economic activity carried out in the local unit at which he or she works. If, however, the local unit provides an ancillary service to another unit (e.g. administration, storage, etc.) in the business then the persons in the ancillary unit are classified to the industry of the unit it services. Thus, while the occupational classification is concerned only with the particular work performed by an individual regardless of the activity carried on at the local unit, the industrial classification is concerned only with the ultimate purpose of the unit or end product regardless of the precise nature of the work performed by each individual. A manufacturing or commercial unit may employ persons with many different occupations for the purpose of making a particular product or for giving a particular service. Conversely, there are cases in which particular occupations are largely confined to a single industry. For example, the majority of persons with agricultural occupations are in the agriculture industry and most miners are in the mining industry.

The term *industry* as used for Census of Population purposes is not confined to manufacturing industry. It is synonymous with the term "sector of economic activity". The basis of the industrial classification is, in the case of employees, the business or profession of their employer and in the case of self–employed persons the nature of their own business or profession.

The most detailed level of the industry classification distinguished in the present report is given in Appendix 2, while the intermediate level of industrial groups is given in Appendix 3. Both are identical to the classifications used in 1986. However, in order to comply with international requirements to publish comparable information on the basis of the European classification Nace Rev1, it was necessary to code responses in the 1991 Census to a greater level of detail than in 1986. About a quarter of the 3 digit headings were further disaggregated. This enabled the derived information to be regrouped in such a way that the requirements of both the national 3 digit classification and the international Nace Rev1 classification could be simultaneously satisfied. Coding at the more detailed level is not considered to have caused any significant discontinuity between the 1986 and 1991 results.

Occupation

All persons aged 15 years and over who were at work, unemployed (other than first job seekers) or retired were classified in the census to their usual (or previous) principal occupation on the basis of the responses to the following census question:

OCCUPATION

If at work, state here the usual principal occupation, giving a full description.

If unemployed or retired, describe the principal occupation previously held.

Persons described as farmers or farm workers should also state the area of the land currently/ previously farmed.

For students or persons at school state the type (Secondary, Community, Vocational, University, etc.).

The following more specific instructions as to how the question should be answered were given in the explanatory notes attached to the census questionnaire:

(i) If at work, state the usual principal occupation i.e. that by which the living is mainly earned.

(ii) If unemployed or retired, describe the principal occupation previously held.

(iii) ***In all cases describe the occupation fully and precisely*** *using any special name by which the job is known and stating the type of work done. The following are examples of the types of occupational descriptions which should be used:*

Hosiery Machine Operator
Woodworking Machinist
Sound Technician
Laboratory Technician

Dock Labourer
Builder's Labourer
Civil Engineer
Electrical Engineer

Gas Fitter
Electrical Fitter
Garage Foreman
Site Foreman

Ticket Checker
Goods Checker
Radio Mechanic
Motor Mechanic

General terms such as "Machine Operator", "Technician", "Labourer", "Engineer", "Fitter", "Foreman", "Checker", "Mechanic", SHOULD NOT BE USED ALONE.

(iv) For civil servants and local government employees, the grade should be stated and for Army or Garda personnel, the rank should be stated.

(v) For teachers, the branch of teaching should be stated, e.g. "Primary teacher", "Vocational teacher", etc.

(vi) For clergy and members of religious orders engaged in teaching or other service, a full description should be given such as "Christian Brother, primary teacher", "Nun, general hospital nurse", etc.

(vii) If a farmer or farm worker and regardless of present status (Question 19), state also the area and unit (statute acres/hectares) of the land farmed (i.e. including land taken and excluding land let). Specifically if retired, then state the area farmed at retirement.

(viii) *For students or persons at school, state the type of school or institution, i.e. "Secondary", "Community", "Vocational", "University", etc.*

A person's occupational classification is determined by the kind of work performed in earning a living, irrespective of the place in which, or the purpose for which, it is performed. The nature of the industry, business or service in which the person is working has no bearing upon the classification of the occupation. For example, the occupation "clerk" covers clerks employed in manufacturing industries, commerce, banking, insurance, public administration, professions and other services, etc.. The most detailed level of occupations for which information from the 1991 Census is published is given in Appendix 4.

In addition to publishing information on occupations on the same basis as in the 1986 Census there was also a requirement to adhere to the international occupation classification ISCO Com (88). The significant structural differences between the two classifications necessitated the use of a very detailed common coding system.

Because of the difficulties of coding at the more detailed level, entailed by this common classification, the degree of comparability between 1986 and 1991 is not as precise as that which would have been attained by directly coding responses to the former less detailed classification. In addition there was an increase in the number of persons classified to residual categories such as those "not elsewhere specified" between 1986 and 1991. This was due to both classification difficulties and a greater incidence of incomplete occupation information being furnished by respondents in 1991. For the above reasons caution should be exercised by users in comparing the 1986 and 1991 occupation data at the most detailed 3 digit level.

Employment Status

Each person, at work, unemployed or retired was classified by "employment status" to one of the following groups:

(1) Employer or own account worker

(2) Assisting relative

(3) Employee

(4) Out of work

The census question relating to employment status was formulated as follows:

EMPLOYMENT STATUS

If at work please ✓ the appropriate box to indicate person's present employment status.

If unemployed or retired, indicate the person's previous employment status.

Self–employed, with paid employees	☐ 1
Self–employed, without paid employees	☐ 2
Employee	☐ 3
Assisting relative (not receiving a fixed wage or salary)	☐ 4

Labour Force

The results of the annual Labour Force Survey (LFS) provide the basis for the official series of annual mid–April labour force estimates. The labour force and its constituent figures shown in this Volume are directly based on the census. Users should be aware that information derived from identical questions in the census and LFS for the same year may show appreciable differences. The main categories affected are the constituents of the question on principal economic status and the employment estimates classified by industry and occupation. The main reasons for the differences are:

- the census form is completed by a responsible adult in each household throughout the State in respect of everyone present in the household on census night while the LFS is by face to face interview;
- the census related to all persons present in the State (including visitors from abroad) at the time of the census while the LFS covers persons usually resident in Ireland;
- the census is a complete enumeration while the LFS is a sample survey;
- the LFS has a much wider range of questions on the labour force which may have a bearing on the responses received to individual questions.

The magnitude of the differences between the census and the LFS has increased between 1986 and 1991.

Principal Economic Status

Table A shows the number of persons aged 15 years and over classified by principal economic status and sex for both 1986 and 1991.

Total	2,515,942	1,244,044	1,271,898	2,585,145	1,270,580	1,314,565

The total population aged 15 years and over increased by 69,203 persons (2.8 per cent) from 2,515,942 in 1986 to 2,585,145 in 1991. Females contributed more than males to this increase both in absolute and relative terms. The number of persons in the labour force (i.e. those at work, unemployed or looking for a first regular job) increased by 53,324; the male decrease of 9,100 being more than off–set by a female gain of 62,424. The number of persons outside the labour force also increased, albeit at a more modest rate of 15,879. Male gains (+35,636) were partially off–set by female losses (–19,757).

Persons looking for a first regular job and those engaged in home duties were the only categories in Table A to show decreases between 1986 and 1991. The former decreased by nearly 9,000 and the latter by over 58,000. The total number of persons at work increased by nearly 58,000 over the five year period. Most of this increase (+55,295) related to females. There was a slight increase in the number of persons unemployed in the 1986–1991 inter–censal period. This comprised a decline in male unemployment (–6,212) off–set by an increase in female unemployment (+10,597). The rise in the number of females at work and unemployed (+65,892) was counterbalanced by a decline of 60,627 in the number of females engaged in home duties.

Student numbers increased by nearly 38,000 over the five years. This increase was shared fairly evenly between males and females. The residual category "other", which includes retired persons, showed an increase of about 13 per cent between 1986 and 1991 with females accounting for most of the rise.

Table B gives a breakdown of the population aged 15 years and over by broad age group and sex within the main principal economic status categories in 1991. As already stated the labour force consists of those at work, unemployed or looking for a first regular job.

The table indicates that for each of the economically active age groups (i.e. 15–64) there were more males in the labour force than in any of the other principal economic status categories. By contrast this relationship only held for females in the 25–34 age group. For the 35–64 age groups the category "home duties" predominated for females. This category was also the most prevalent in the case of females aged 65 and over whereas for males the residual category "Others", which includes retired persons, accounted for most of the 65 and over age group. In 1991, there were just over 283,000 students, of whom 50.5 per cent were females.

The contrast between the positions of males and females can be seen more clearly from Table C which shows the percentage of males and females aged 15 years and over classified by age group and principal economic status.

While labour force participation rates (i.e. those in the labour force expressed as a percentage of the relevant population total) were higher across all age groups for males than for females the differential was most marked in the case of the 35–44 and 45–54 age groups. The age group with the highest female labour force participation rate was the 25–34 age group. Thereafter, the rate declined with increasing age reflecting the effects of marriage and childbearing on women's participation in the labour force. Over six in every ten women in the 35–44 and higher age groups were engaged in home duties in 1991.

Labour Force participation rates by Age Group

Table D provides an analysis of labour force participation rates in 1991 by sex and five year age group. It also provides comparative data for 1981 and 1986.

Overall, male labour force participation declined from 76.4 per cent in 1981 to 74.0 per cent in 1986 and then to 71.7 per cent in 1991. This decline was most marked in the 15–19 age group as well as in the over 60 year old age groups. Conversely, there was an increase in overall female labour force participation over the same ten year period despite a decline in the rate for the 15–19 age group. The increasing female labour force participation occurred in all age groups from 20–24 to 55–59 inclusive and was most marked in the case of 30–34 year olds.

In Table E the labour force participation rates for females aged 20–54 years are disaggregated according to marital status.

*Including the "other status" category which was separately identified in 1981

The table illustrates increasing labour force participation rates for ever–married females in the case of all five year age groups and all cohorts between 1981, 1986 and 1991. The single female cohorts other than the 20–24 year cohort showed declines in labour force participation rates over the ten year period. There were gains in the labour force participation rates of widows aged 25 years and over between 1986 and 1991 representing a reversal of the trend observed between 1981 and 1986.

Analysis of persons at work by Industrial Group and Planning Region

In overall terms the eastern region accounted for about 40 per cent of total employment in 1991. The dominance of this region in sectors outside of agriculture is particularly evident from Table F. Almost half of all persons at work in the service type industries and almost 38 per cent of those in production industries were enumerated in the eastern region. By way of contrast, the western region, which accounted for 8 per cent of total employment, had a one in seven share of agricultural employment in 1991.

There were 158,208 persons at work in agriculture, forestry and fishing in 1991 compared to 313,313 in production industries and 677,559 in services, the latter representing approximately 59 per cent of total employment. The change over time in the relative share of total employment accounted for by the three broad sectors of economic activity is illustrated in Figure 1. The figure shows the percentage distribution of persons at work by broad economic sector for selected censuses since 1926, and the diminishing importance of agriculture in terms of the numbers at work is clearly evident. The growth of the services sector, particularly since 1961 is also evident.

The main contributors to the overall increase of nearly 58,000 in employment between 1986 and 1991 were professional services (+18,300), insurance, finance and business services (+15,800) and personal services (+11,200). Females accounted for two thirds of the gains in these sectors. The largest declines in employment were experienced in agriculture, forestry and fishing (−8,700), textiles, clothing, footwear and leather (−4,900) and food, beverages and tobacco (−4,200). Males contributed most to the declines in two of these sectors; the exception being textiles, clothing, footwear and leather in which females accounted for 65 per cent of the decline.

Table H shows the change in the number at work between 1986 and 1991 in each of the main industrial sectors in each planning region.

Over half of the increase in employment between 1986 and 1991 occurred in the East. Increased employment in services was the predominant influence. The regions which showed the greatest relative declines in agricultural employment were the North West and Donegal (−12.7 per cent) and the West (−10.1 per cent). There were minor changes in industrial employment, positive in some regions and negative in others, between 1986 and 1991.

Employment Status

Table I classifies persons, males and females at work in 1991 by employment status with comparative information for 1986. Derived actual and percentage changes are given in Table J.

Table I Employment status of persons at work classified by sex – 1986 and 1991

Employment Status	1986			1991		
	Persons	Males	Females	Persons	Males	Females

Total at work	1,091,155	741,318	349,837	1,149,080	743,948	405,132

Some 894,500 or approximately 78 per cent of persons at work were classified as employees in 1991. Employers and own account workers accounted for approximately 231,900 persons or a further 20 per cent, while assisting relatives numbered less than 22,700 and comprised only 2.0 per cent of persons at work.

The 9,000 increase in the number of employers and own account workers was cancelled out by a decrease of similar proportions in the number of assisting relatives. The increase in the number of employees was therefore responsible for the overall rise of nearly 58,000 in employment in the 1986–1991 inter–censal period. The decline in the number of assisting relatives was more pronounced in the combined non–agricultural sectors both in absolute and relative terms. Declines in the number of employers and own account workers in agriculture, forestry and fishing were more than off–set by gains in this employment status category in other industries.
